

Achieving UN SDGs with MALAYSIAN PALM OIL

1917

Malaysia's palm oil industry started when Frenchman Henri Fauconnier commercially planted the oil palm in Batang Berjuntai (Bestari Jaya), Selangor.¹

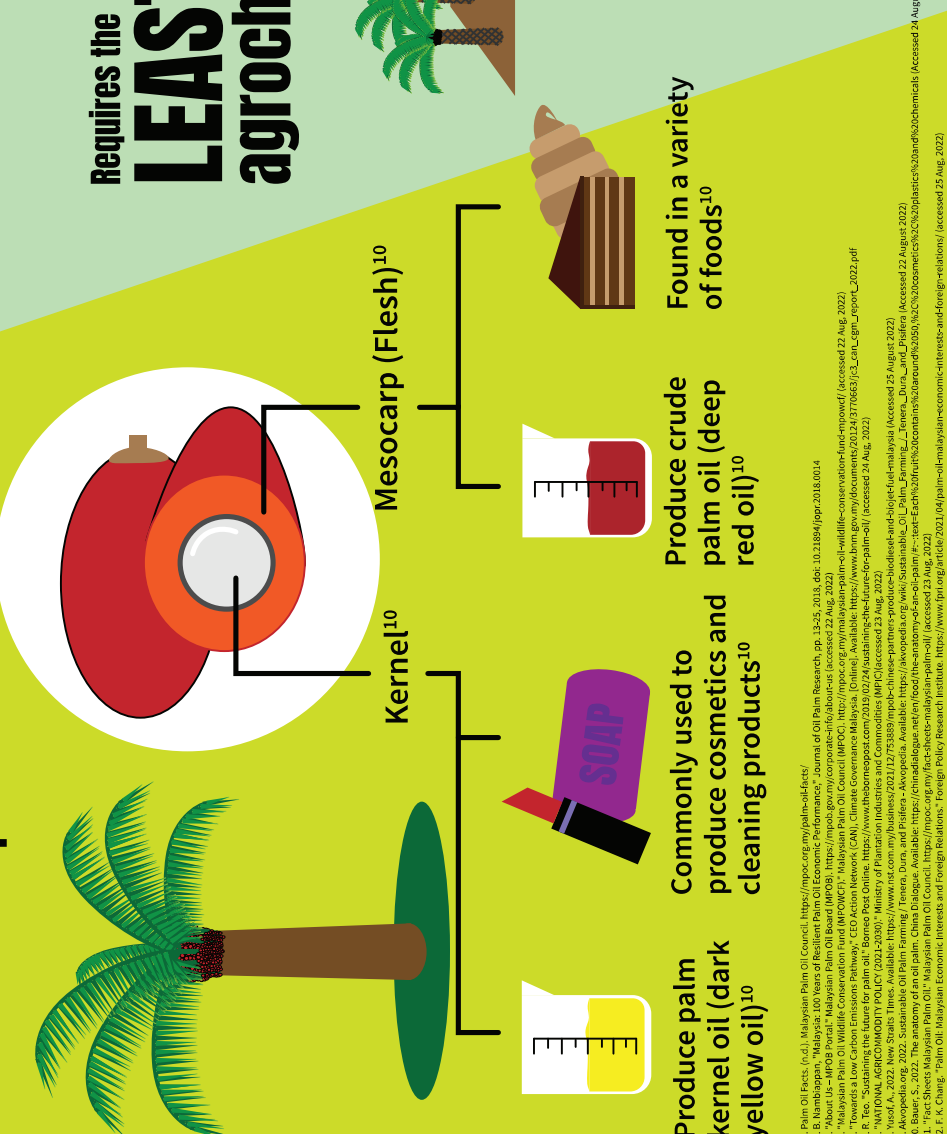

1970 - 2000

Malaysia begin export of palm oil and started research on the potential use of palm oil as feedstock.²

Palm Oil Species: Tenera⁹

2000 - 2010

The Malaysia Palm Oil Board (MPOB) was created to overlook all oil palm research & production.³ In the following decade, the Malaysian Oil Palm Wildlife Conservation Fund would be initiated to assist conservation efforts.⁴

2010 - 2020

2015, Malaysia signed the Paris Agreement, targeting a reduction in GHG emissions intensity by 45%, by 2030⁵, and implemented the Malaysia Sustainable Palm Oil (MSPO) certification to increase sustainability of palm oil.⁶

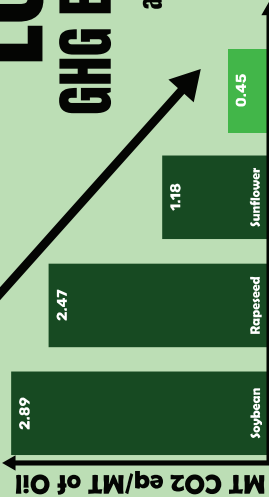

Sustainability of Palm Oil:

Requires the **LEAST** agrochemical & fossil fuels inputs for cultivation.¹¹

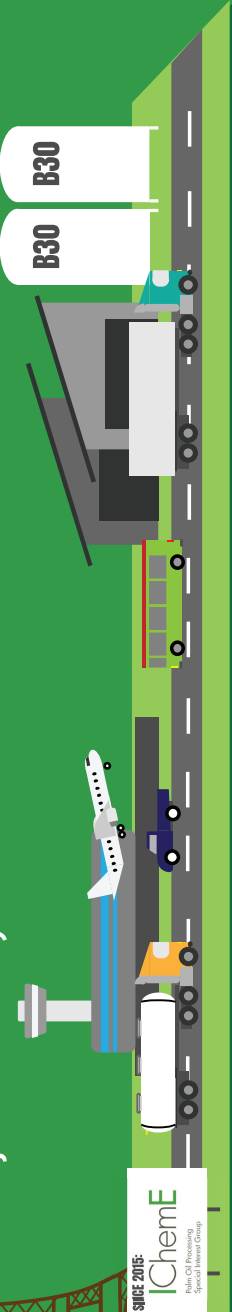

LOWEST GHG Emissions among other oil crops¹¹

2020 - present

Malaysia launches B20 biodiesel mandate.⁷ The MPOB has also partnered with multiple Chinese institutions to produce biodiesel and biojet fuel in Malaysia.⁸

2030

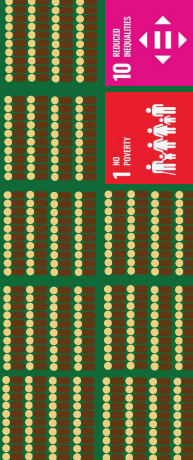

Targets 100% Biodiesel sourced from certified sustainable palm oil, B30 (transport) and B10 (industry).⁷

Significance of Palm Oil:

5.9 MILLION ha of oil palm planted⁷

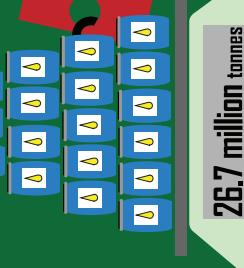

> 400,000 workers⁷

= X 7

RM 73.3 BILLION

Palm Oil Export⁷:
